

## ADVISOR GUIDE TO MATH PLACEMENT

For a student who places lower than expected in view of his or her academic record, an advisor may select a higher level math course based on the student's ACT or SAT math score as indicated by this chart. Changes should never be made automatically, but should be considered after a discussion with the student regarding his or her current math skills. If the student wishes to enroll in a higher level math course than is indicated by this chart, he or she will be required to retake the COMPASS placement test and should be referred to UAS to make arrangements. The retest fee is \$15 and only one retest is allowed. Therefore, students should review prior to testing for the best possible outcome.

### Example Of How To Use The Chart

**Student A** places into UAS080 and has an ACT math score of 18. After discussion with the student, if he is confident that he can be successful in a higher course, the advisor has the discretion to enroll the student in UAS095. If the student believes he should be in MTH101 or higher, he is required to retest and should be referred to UAS.

**Student B** places into UAS095 and has an ACT math score of 18. After discussion with the student, she believes that she could handle MTH101. The course recommendation should remain the same and the student should be given the retest option and referred to UAS.
